

SEED-TO-SALE APPLICATIONS TO TRANSFORM YOUR BUSINESS

TrackVia gives you the freedom to create enterprise-grade web and mobile apps to fit your exact business needs. With TrackVia, you can digitize your operations to eliminate manual data collection, integrate with multiple systems, automate workflows, and analyze data to make informed decisions — all without help from IT.

FAST AND EASY. GET UP AND RUNNING IMMEDIATELY

With the help of TrackVia experts, most cannabis and hemp organizations deploy their custom applications in weeks, not months, and with clicks, not code. This is accomplished through TrackVia's industry-leading drag-and-drop functionality and intuitive, visual tools. Unlike other enterprise software, the TrackVia platform can automate processes across your entire organization — including cultivation, production, quality and compliance control, facilities management, sales, inventory, and more. Plus, it seamlessly integrates with your POS and wholesale ordering software and compliments your state-mandated tools like Metrc and MJ Freeway.

FULLY ADAPTABLE. RUN YOUR BUSINESS YOUR WAY

Web and mobile applications built on the TrackVia platform are infinitely adaptable — allowing you to tailor apps to your business operations. Modify, tweak and adapt your apps anytime with just clicks to ensure you're keeping up with changing industry regulations. The best part? Changes you make to apps are instantly reflected across all of your web and mobile devices.

MOBILE READY. ENABLE WORK FROM ANYWHERE, ANYTIME

Unlike most vendors, which only offer a web-based solution or require separate development, native mobile apps for iOS and Android devices are built into the TrackVia platform — providing you with unique advantages including the ability to:

- Collect and edit data anytime from any location (facilities, farms, or the office) even when offline
- Scan barcodes or create new ones
- Attach audio notes, pictures, and geo-location to records
- Capture signatures

BUILT FOR COMPLIANCE . FULLY SECURE AND RELIABLE

Hosted on Amazon AWS, you can rest assured knowing that your applications are secure, reliable, and highly available. Since 2006, we have a proven track record of uptime and 99.999% availability. Your app also offers:

- Custom fields, thresholds, triggers, alerts, and notifications to monitor every process and automate prevention measures or corrective actions
- Comprehensive audit trails available within seconds
- Real-time analytics and reports with customizable charts, graphs, and dashboards
