

TRACKVIA VS. IN-HOUSE IT SOLUTIONS

When it comes to streamlining departmental or company-wide processes and operations, many organizations debate whether it's better to have their IT team develop an internal solution or to look outside their organization at a low-code application platform.

If your organization is undergoing a similar debate, we've put together this simple document to highlight the benefits of leveraging TrackVia over developing a solution in-house.

SPEED TO SOLUTION

Let's face it. Today's IT teams are busy and only getting busier. In fact, the IT backlog has increased 29% in the past 18 months.¹ Building an internally-developed solution is hard and time-consuming work for everyone involved. With TrackVia, you can be up and running in weeks with a robust, enterprise-grade solution that's modern and mobile.

LESS RISK

It's estimated that 1 in every 3 internal development projects are destined to fail.² TrackVia's platform allows for rapid prototyping, agile development and delivery, and fast configuration to ensure successful user adoption. In addition, TrackVia's industry-leading implementation engineers can aid in the design and development process, so your IT team can focus on their most critical development work.

COST

When considering the cost of developing an in-house application, some organizations do not factor in expenses beyond the initial development and implementation, such as maintenance, hosting, hardware, upgrades, and end-user support. With TrackVia's SaaS pricing model, all of these costs are included—saving you time, money and resources.

FLEXIBILITY

What happens if your scope or requirements change now or in the future? Even seemingly small changes can dramatically increase your time-to-delivery and project costs. With TrackVia, changes to your applications can be made with drag-and-drop ease, and new platform enhancements and upgrades are immediately available to all users on your platform.

NATIVE MOBILITY

Mobile developers are in high demand, and integrating a true mobile experience into desktop software is often complex, costly, and time-consuming. Technology changes rapidly, so even today's most innovative mobile application can quickly become obsolete. TrackVia's mobile apps are cutting-edge, native and fully integrated—eliminating the need to build or manage two separate mobile and web systems.

END-USER SUPPORT

Many organizations that choose to build an in-house IT solution forget to think about the on-going end-user support that will be required for optimal usage of an application. With TrackVia, you can quickly enhance your app in response to end-user requests. TrackVia also has a dedicated customer success team that is available to answer end-user or administrator questions and can help troubleshoot any potential one-off issues that may arise.
