

TRACKVIA INTEGRATIONS

In this age of innumerable business-critical applications, mid-size and enterprise organizations have a never-ending struggle with acquiring data. With important data living in disparate systems, companies face duplicate data, dirty data, out-dated and out-of-sync data resulting in a myriad of upstream and downstream problems.

EASILY CONNECT ENTERPRISE-GRADE SYSTEMS

TrackVia Integrations solves all the problems of acquiring data across systems by giving you a simple way to connect those systems together and ensure that your data is clean, consistent, and in-sync.

TrackVia Integrations allows you to easily connect TrackVia to various enterprise-grade systems, such as Encompass, Viewpoint, Oracle, and NetSuite. Once the connections are made, you can set up and modify workflows between those systems using a graphical user interface and drag and drop configuration with fast, seamless deployment.

With TrackVia Integrations, you can:

- Easily and securely set up integrations between TrackVia and other enterprise-grade applications, such as SAP, Oracle, ServiceMax, ADP, and 400+ popular apps in the cloud and on-premise
- Set up critical workflows to ensure bi-directional data synchronization
- Create actions based on conditions, iterate through line-items, and trigger event-based or scheduled actions
- Keep your data updated in real-time
- Review the history of jobs and re-run failed jobs

TrackVia Integrations includes capabilities such as:

- Flexible triggers and actions to kick off integrations
- Powerful conditions, loops, and error handling
- Easy to use drag and drop build environment
- Shared pre-built integrations
- Smart versioning
- Change tracking and auditing

TrackVia Integrations is powered by Workato, an award-winning cloud automation and integration platform with enterprise-grade capabilities and no coding required. Integrations with TrackVia can also be done with Zapier and through our Developer APIs.
